## BREAKFAST CEU SERIES

Those in need of CEUs for their TDA Pesticide License can join us on the FOURTH Tuesday of each month for our Breakfast CEU Meetings.

Each meeting will be a “Dutch treat” breakfast and those in attendance will receive one hour of pesticide CEU credit.

There will be a one-time \$10 fee for attending the yearlong Breakfast CEU Series.

The following dates, times and locations have been set. *Please note the later start time for January’s meeting.*

Jan 27th	Miss Mollie’s Diner	7:00am
Feb 24th	Beverly’s Café—Jacksonville	6:30am
March 24th	County Ext Office—Rusk	6:30am

## Common Winter Weeds in Pastures and Hay Meadows

### Buttercup (*Ranunculus* spp)

*Buttercup growing in a ryegrass pasture in East Texas.*

Spray buttercup in late February or early March before it flowers. This weed is easily controlled with 2,4-D amine, Metsulfuron 60 DF, Cimarron Plus, Grazon P+D, GrazonNext HL and dicamba + 2,4-D (Weedmaster). In dormant bermudagrass/bahiagrass glyphosate (Roundup) will control buttercup at normal use rates.

### Groundsel (*Senecio* spp)

*Mature Texas Groundsel*

Metsulfuron 60DF or Cimarron Plus has proved to be the most effective herbicide for groundsel control. Apply in the rosette stage (~March). Grazon P+D provides partial control.

### Red Sorrel (*Rumex acetosella*)

Grazon P+D provides excellent control of red sorrel. Metsulfuron or Cimarron Plus is also very good. Treat anytime the red sorrel is actively growing. Remedy Ultra is not effective on red sorrel.

### Thistles

*Thistle in rosette stage*

Although there are at several different species of thistle in Texas, most are closely related and control recommendations will not differ. **Best time to control with a herbicide is when thistles are in the rosette stage. The rosette stage is when the thistle forms a low-growing ring of leaves.** As they mature they are harder to control and may require higher rates of herbicide to have effective control. Grazon P+D, GrazonNext HL and dicamba + 2,4-D (Weedmaster) provide excellent control of thistles.

### Dandelions (*Taraxacum* spp)

The key to effective control is spraying while dandelions are in the rosette stage of growth (before the flower stalk appears). 2,4-D or 2,4-D + dicamba (Weedmaster) can provide excellent control. Metsulfuron 60 DF or Cimarron Plus are also very good options.

In response to the increased activity in Mexico regarding New World screwworm, Texas A&M AgriLife brings together its research, teaching and extension expertise to help educate and provide research-backed information to Texas citizens.

[Download a printable PDF version of this fact sheet](#)

## Background

The New World screwworm (NWS, *Cochliomyia hominivorax*) is a parasitic fly native to the Western Hemisphere. It lays eggs in the living tissue of fresh wounds in warm-blooded animals. The larvae (maggots) feed on the host's flesh, causing severe wounds and often death if untreated.

The pest was eradicated in the U.S. in the 1960s. Since then, it occasionally reemerges and has resurfaced in Central America and Mexico. They are controlled only through the release of sterile males, known as the sterile insect technique (SIT). This approach, along with regular active surveillance and livestock inspections, has proven highly successful.

As of May 2025, renewed attention to this parasite is crucial, as it may pose future risks to livestock and wildlife.

## Signs of New World Screwworm in Animals

**Figure 1.** Screwworm infestation in dog

The name screwworm refers to the feeding behavior exhibited by the maggots as they burrow (screw) into the wound. These maggots and their feeding cause extensive damage by tearing at the hosts' tissue with sharp mouth hooks. The wound will become larger and deeper as more and more eggs hatch and larvae feed on the living tissue. This results in serious and often deadly damage to the animal if not discovered and treated.

Continual and regular monitoring and evaluation of all livestock are important for herd and flock biosecurity and health considerations. Producers should be alert for possible signs associated with potential infestation including: *Foul-smelling wounds with visible maggots, Animals biting or licking at wounds, Lesions in navels, ears, dehorning or branding sites, Unusual restlessness or lethargy*

**Figure 2.** Screwworm larva

In the New World screwworm, the larval stage (Figure 2) is responsible for inflicting significant injury and economic loss. These larvae inhabit the wounds of living animals, where they cause extensive tissue damage. Mature larvae can reach 17 mm in length (2/3 of an inch) and have spines that protrude from the body and wrap around in a spiral giving them the name screwworm. Official identification of larvae is based largely on the presence or absence of dual internal breathing tubes. Confirmation of the fly identity can be determined only by a trained individual.

## Identifying Screwworm Flies

Adult New World screwworms, *Cochliomyia hominivorax*, (Figure 3) are metallic blue blow flies with three distinct stripes that run down the top (thorax) of the fly just behind the head with large orange eyes. This fly resembles the closely related secondary screwworm, *Cochliomyia macellaria*, which is also a metallic blue blow fly with three distinct stripes, but the stripes all begin at the same point behind the head. Adult secondary screwworms do not deposit eggs on living animals, and their larvae do not infest them. Therefore, they do not pose a threat to animal health.

**Figure 3.** Adult New World Screwworm fly

Adult flies of interest can be photographed and emailed to the Texas A&M AgriLife Extension Service at [screw-worm@ag.tamu.edu](mailto:screw-worm@ag.tamu.edu).

Report any mammals or birds (wild or domesticated) with signs of irritated behavior or head shaking, those that express a smell of decay but are alive, or those that show evidence of fly strike and/or the presence of fly larvae (maggots) in wounds.

## Screwworm in the New World

Screwworm infestations occur in Jamaica, Cuba and across South America. Increasing detections of this fly north of its containment barrier, the Darien Gap in Panama, were noted in 2023. Typical insecticide suppression of the New World screwworm is less effective than with other insect pests due to its wide host range and occurrence on wildlife.

## Potential Control Products for use in the U.S.

U.S. producers have not treated livestock for NWS in more than 40 years. Although this health threat has not been experienced in several decades, several treatment strategies exist today and should always be used in consultation with your local veterinarian. Treatments could include:

- Preventive measures: treat wounds promptly and maintain sanitation
- After infestation: topical larvicides (e.g., coumaphos, permethrin), cleaning and removal of larvae

## MASTER GARDENER TRAINING

*Looking for something positive and  
 productive to add to your life?*

Master Gardening is a perfect way get deeper into the science of growing plants (50+ hours of Hort Science) and give back to the local communities.

The orientation class will be Tuesday, February 3, 2026, 9am, at the Annex building in Rusk, 165 E 6th Street, Rm #102. Classes go from **February through April on Tuesday and Thursday mornings.**

Please call 903-683-5416 or email [kim.benton@ag.tamu.edu](mailto:kim.benton@ag.tamu.edu) for more information.

*Our application process is online now, so everyone interested should go ahead and fill out an application [here](https://evs.tamu.edu/application/master-gardener) (<https://evs.tamu.edu/application/master-gardener>)*

## Growing the Mighty Muscadine in East Texas

Now is the perfect time to dig a little bit deeper into the fun of growing the East Texas native muscadine grapes. How to grow them, as well as updates on new seedless varieties soon available.

Door prizes will include some grapevines looking for new homes!

Friday, January 16th  
 10am

Jacksonville Public Library  
 526 E Commerce St, Jacksonville, TX 75766

It is hard to believe that even though we just had our first hard freeze, that is it time to plan for those juicy amazing tomatoes that you can show off at **TomatoFest** 2026. That time is indeed here!

Whether you want to grow the biggest, the best plate of 3, try out that new cherry tomato category, or some wild and wonderful heirloom/open-pollinated varieties, now is the select your varieties and plan your seed sources. We will definitely have lots of good tomato varieties at the **Seed Swap** on February 6th, and there some wonderful online sources as well.

Start your seeds at the end of January or the beginning of February so that you will be able to put your plants out in March. Add fertilizer to the soil at planting, and fertilize again when the tiny fruit start forming. Make sure they are planted in full sun, and that they get plenty of water! See you in June at **TomatoFest**!

## CHEROKEE COUNTY ANNUAL SEED SWAP

Friday, February 6th, 9am-1pm | Rusk Civic Center—555 Euclid Street, Rusk, TX 75785

2026 Upcoming Programming:

# LIFESTYLE CHANGES 2026

## WHAT'S FOR DINNER TONIGHT

## WHAT DOES YOUR FITNESS PLAN LOOK LIKE- ON A BUDGET ?

What does your fitness plan look like in 2026— on a budget? Put your tennis shoes on the ground and get moving! Take advantage of free exercise classes in your community or simply enjoy a walk outside. Include activities that bring you joy, like dancing, laughter, and spending time with friends. Build strength, improve flexibility, and give your body the relaxation it deserves. Movement doesn't have to be expensive to be effective. Call a friend, make a plan, and let's get moving together. Small steps every day can lead to big changes for your health and happiness.

## FIND A GROUP NEAR YOU AND GET MOVING

## CHILI MAC

**SERVINGS:** 6

### INGREDIENTS:

- ½ lb. extra lean ground beef chuck or round
- 1 small onion, chopped
- ½ medium green bell pepper, chopped
- 1 c. elbow macaroni, dry
- 1 (8oz) can tomato sauce, unsalted
- 2 c. water
- 1 tsp chili powder
- ½ tsp salt
- 1c. canned, low sodium pinto beans
- ½ c. reduced fat cheddar cheese, low sodium

### INSTRUCTIONS:

Wash your hands and clean your cooking area. In a large skillet, brown the meat and drain off any remaining fat. Add the onions and green peppers to the meat. Cook for 5 minutes on medium to low-high heat. Add remaining ingredients, *except cheese*. Cover and cook on low heat for 15 minutes, stirring occasionally. Add cheese and continue to heat until melted. Serve immediately.

## REST & RELAXATION

Most adults need 7–9 hours of sleep per night, with older adults typically needing 7–8 hours. For exercise, health guidelines recommend about 150 minutes of moderate activity per week, which averages to 30 minutes a day, five days a week. Alternatively, 75 minutes of vigorous activity per week can meet the same goal. In addition, adults should do strength training at least two days per week, targeting major muscle groups. Getting adequate sleep and regular physical activity supports heart health, mental well-being, and overall energy levels.

# WHAT IS HAPPENING IN 2026?

## UNPLUGGED LIFESTYLE CHANGES IN 2026 STRATEGIC PLANNING FOR A HEALTHY NEW YOU.

**Family Mealtime**

Join us for a series of fun and easy challenges designed to strengthen family bonds and make mealtime a meaningful experience. Here's what we've got planned:

**ACTIVITIES:**

- ✓ Family Dinner Week
- ✓ Kids Cook Week
- ✓ Tech Free Challenge
- ✓ Clean-Up Crew
- ✓ Dinner Conversation Starters

## A Little Winter Fun in the Kitchen!

**WEEK 1: FAMILY DINNER WEEK:** COMMIT TO HAVING DINNER TOGETHER AS A FAMILY AT LEAST 4 TIMES A WEEK. IF 4 TIMES A WEEK SOUNDS TOO CHALLENGING, TRY ADDING ONE EXTRA MEALTIME MORE THAN YOUR TYPICAL WEEK. LET'S MAKE MEALTIME A PRIORITY! ADDING ADDITIONAL FAMILY MEALS MAY TAKE SOME ADDITIONAL PLANNING, CHECK OUT OUR LIST OF SLOW COOKER RECIPES OR AIR FRYER RECIPES TO MAKE DINNER EASIER.

**WEEK 2: TECH-FREE TABLE CHALLENGE:** MAKE DINNER A SCREEN-FREE ZONE. PUT AWAY THE PHONES, TVS, AND TABLETS AND FOCUS ON EACH OTHER. ☑ TECH FREE WEEK IS A GREAT TIME TO DISCUSS TABLE MANNERS! TABLE MANNERS ARE AN IMPORTANT SKILL FOR KIDS TO LEARN, READ MORE ABOUT TABLE MANNERS HERE AND START CREATING A POSITIVE MEALTIME EXPERIENCE!

**WEEK 3: DINNER CONVERSATION STARTERS:** ENGAGE YOUR KIDS WITH FUN CONVERSATION TOPICS. ASK YOUR KIDS ABOUT THEIR DAY, FAVORITE HOBBIES, OR DREAMS FOR THE FUTURE! LET'S MAKE EVERY MEAL A TIME TO CONNECT. ☑ LEARN MORE ABOUT WHY FAMILY MEALTIME IS IMPORTANT AND HOW IT CAN BENEFIT YOUR FAMILY AND CHILDREN.

**WEEK 4: KID COOKS WEEK:** WHETHER THEY HELP WITH THE CHOPPING OR THE COOKING, GET THEM INVOLVED IN THE KITCHEN. LET THEM HELP PLAN AND PREPARE ONE MEAL THIS WEEK! ☑ CHECK OUT OUR LIST OF KID FRIENDLY RECIPES TO GATHER SOME INSPIRATION FOR YOUR KIDDOS!

**WEEK 5: CLEAN-UP CREW:** MAKE POST-DINNER CLEANUP A TEAM EFFORT. ASSIGN TASKS AND WORK TOGETHER TO TIDY UP AFTER DINNER.
